**BIOLOGY, MS**

**Department of Biology, College of Arts and Sciences**

**Vision Statement**

The goal of the Department of Biology is to provide students with individualized, broad training in biology leading to a Master of Science (MS) degree. Original research is an integral part of both the thesis and non-thesis degree options. Faculty areas of expertise include ecology, physiology, genetics, molecular biology, taxonomy, behavior, and developmental biology of a wide variety of organisms. The MS degree prepares students for employment in industry, private or government agencies, and academics, as well as further education in professional programs, such as the PhD or MD.

**Program Contact Information**

P. Roxanne Kellar, PhD, Graduate Program Chair (GPC)
521C Allwine Hall (AH)
402.554.2840
rkellar@unomaha.edu

**Program Website** (https://www.unomaha.edu/college-of-arts-and-sciences/biology)

**Other Program Related Information**

The Department of Biology annually awards 17 graduate assistantships. New applicants should indicate their interest in applying for an assistantship as part of the admission application and should include your employment history along with names and contact information of three references in your resume or CV. The assistantships require 20 hours per week of teaching and/or other assignments.

**Admissions**

**Application Deadlines**

- Fall: February 15
- Spring: October 15
- Summer: February 15

**Program-Specific Requirements**

- The applicant’s GPA in undergraduate biology courses will be determined and must be 3.0 or above (on a 4.0 scale)
- An applicant must normally present 24 semester hours of credit in the biological sciences, including genetics (sophomore level or above), ecology (junior level or above) and molecular/cell biology (junior level or above). Preparation in the supporting sciences must include a course in inorganic or introductory chemistry, a course in organic chemistry or biochemistry, a course in introductory physics and a course in mathematics (college algebra, trigonometry or calculus) or statistics. Students with inadequate backgrounds in biology or the supporting sciences may be admitted provisionally and will be required to complete courses in the named areas.
- Applicants are required to have a command of oral and written English. Those who do not hold a baccalaureate or other advanced degree from the U.S., OR a baccalaureate or other advanced degree from a pre-determined country on the waiver list, must meet the minimum language proficiency score requirement in order to be considered for admission.
  - Applicants should have a minimum TOEFL of 95 iBT, 7.5 IELTS or 76 PTE.
  - Entrance Exam
  - Graduate Record Exam (GRE) General Test with a combined score (verbal + quantitative) of 297 and a minimum writing score of 3.5.
  - Three (3) Letters of Recommendation

- Current resume or curriculum vitae (CV)
- Shall include an outline of your educational background, employment history, research experience, and a list of references.

- Statement of Purpose
  - The Department of Biology strongly encourages applicants to contact a professor whose research interests overlap with their own goals for graduate research. Because of the individualized nature of the Biology Graduate Program, otherwise qualified applicants may not be admitted if appropriate faculty are not available to serve as advisors. Please indicate in your Statement of Purpose who you have contacted or plan to contact.
  - Applicants not meeting the criteria in terms of GPA or standardized test scores may provide written evidence of experience or potential to perform outstanding graduate work and petition the department for provisional admission as long as their biology GPA is above the 2.7 minimum set by the Graduate College. Students seeking provisional admission should contact two or more biology faculty to discuss admission. Provisional admission will not be removed until the student has earned at least the grade of “B” (3.0 on a 4.0 scale) in each course involved in the first 12 hours of graduate study. Questions about requirements for admission should be directed to the Department of Biology.

**Requirements**

**Thesis Option**

At least 50% of the 30 credit hours will be taken in 8000-level (graduate only) courses. The 30 credit hours of graduate course work must include:

<table>
<thead>
<tr>
<th>Code</th>
<th>Title</th>

| **Electives** |                                    | 33      |
| To be determined by the student, and approved by his/her graduate advisory committee; graduate courses in other departments may be included. |
| **Total Credits** |                                  | 36      |

**Exit Requirements**

All degree students must form a supervisory committee of faculty, chaired by a major advisor from the Department of Biology. In consultation with the supervisory committee, students will develop a plan of study list courses required for graduation. This will include any deficiencies required as a condition of admission and a minimum of 30 graduate credits for the thesis option and a minimum of 36 credits for the non-thesis option. Graduate
students are expected to attend the Graduate Seminar (BIOL 8010) even when not registered for it.

**Thesis Option (6 hours):**
Thesis candidates must complete 6 credit hours of BIOL 8990, Thesis. All candidates should carefully review the Graduate College requirements for forming a Supervisory Committee, Thesis/Thesis Equivalent Proposal Approval Forms and final approval and submission of a thesis.

**Non-Thesis Option:**
Comprehensive Examination administered by the supervisory committee.

**Certificates Offered**
- Biomedical Science Certificate (http://catalog.unomaha.edu/graduate/degree-programs-certificates-minors/biology/biomedical-science-certificate)
- Business for Bioscientists Certificate (http://catalog.unomaha.edu/graduate/degree-programs-certificates-minors/business-administration/business-bioscientists-certificate)

**BIOL 8010 SEMINAR IN BIOLOGY (1 credit)**
A study of current research in any of the divisions of biology. Graduate students will complete this course once for credit.

**Prerequisite(s)/Corequisite(s):** Graduate student in biology and written permission of graduate faculty supervisor. Not open to non-degree graduate students.

**BIOL 8020 INDEPENDENT RESEARCH IN BIOLOGY (1-6 credits)**
Research work under supervision of a member of the graduate faculty. May be taken more than once for credit; up to 4 credits for thesis option of M.S. degree and up to 6 credits for the non-thesis option of the M.S. degree.

**Prerequisite(s)/Corequisite(s):** Graduate student in biology and written permission of graduate faculty supervisor. Not open to non-degree graduate students.

**BIOL 8030 EVOLUTION: FROM GENOMES TO ECOSYSTEMS (3 credits)**
This course will prepare students to evaluate and discuss evolution as an underlying concept in all of biology. Further, it will provide a comprehensive overview of evolutionary processes related to the evolution of genomes, development, physiology, morphology, behavior, and ecosystems. (Cross-listed with STEM 8030).

**Prerequisite(s)/Corequisite(s):** Courses for graduate admission or equivalent, or with permission of instructor.

**BIOL 8060 ADVANCED TOPICS IN BIOLOGY (1-3 credits)**
Lecture and/or laboratory courses for graduate students designed to provide exposure to biological specialties not offered in the regular curriculum.

**Prerequisite(s)/Corequisite(s):** Graduate and permission. Not open to nondegree students.

**BIOL 8070 ADVANCED READINGS IN BIOLOGY (1-3 credits)**
An in-depth study of the literature in a limited segment of the biological sciences under the supervision of a graduate faculty member. May be taken more than once for credit up to a total of six credits.

**Prerequisite(s)/Corequisite(s):** Graduate student in biology and written permission of graduate faculty supervisor. Not open to non-degree graduate students.

**BIOL 8106 BIOGEOGRAPHY (3 credits)**
This course is intended as an introduction to biogeography, the study of the distribution of organisms in space and time. Usually offered every year. (Cross-listed with BIOL 4100, GEOG 4100, GEGG 8106, GEOL 4100, GEOL 8106)

**Prerequisite(s)/Corequisite(s):** BIOL 1450 and 1750 or GEOL 3100 or BIOL 3100, junior-senior.

**BIOL 8116 STATISTICS FOR BIOLOGICAL SCIENCES (4 credits)**
Introduction to statistical methods and software used to display, summarize, analyze, and interpret biological and medical data. (Cross-listed with BIOL 4110)

**BIOL 8126 CONSERVATION BIOLOGY (3 credits)**
Study of biological diversity at the genetic, species and ecosystem levels, its values, and the factors that threaten it. We will explore the scientific basis of conservation biology and how it can be applied to the maintenance of biological diversity. Usually offered every year. (Cross-listed with BIOL 4120)

**Prerequisite(s)/Corequisite(s):** Graduate in biology. BIOL 1750; Recommended: BIOL 3340/8345. Not open to nondegree students.

**BIOL 8136 MOLECULAR GENETICS (4 credits)**
A lecture and lab course that explores the frontiers of molecular genetics research. Topics addressed will include DNA replication, gene function, gene expression, genetic manipulation, cloning, mutational analysis, genome sequencing, and epigenetics. Research techniques will include DNA/RNA isolation, PCR, cloning, gel electrophoresis, transgene generation, data analysis, and quantitative rtPCR. Students will get a solid grounding in scientific writing and presentations, as well as reading and assessing primary scientific literature. Lecture, discussion, and laboratory. Usually offered fall semester. (Cross-listed with BIOL 4130)

**Prerequisite(s)/Corequisite(s):** BIOL 2140, 3020 and CHEM 2210 or 2260 or their equivalents. Not open to nondegree students.

**BIOL 8146 CELLULAR BIOLOGY (4 credits)**
This course is a modern study of mammalian cell function. Focus will be placed on developing skills in experimental cellular biology. Material covered will include tissue culture techniques, cell staining applications, fluorescent microscopy, determination of gene expression, and high-throughput assay design. (Cross-listed with BIOL 4140)

**Prerequisite(s)/Corequisite(s):** BIOL 2140, 3020 and CHEM 2210 or 2250. Junior or senior undergraduate standing or graduate standing. Must enroll in laboratory section and lecture for this course. Not open to nondegree graduate students.

**BIOL 8156 CANCER BIOLOGY (3 credits)**
The etiology of cancers, differences between types of malignancies, oncogenes and genetic modifiers, treatments, susceptibility, and tumor-induced immunosuppression are discussed. This is an active course focused on inquiry-based learning and the purpose of this course is to provide students a foundation in cancer biology while applying tools learned through cell biology, genetics, and immunology courses. (Cross-listed with BIOL 4150)

**Prerequisite(s)/Corequisite(s):** BIOL 3020 and BIOL 2140; Recommended: BIOL 3240.

**BIOL 8170 ECOSYSTEM ANALYSIS FOR EDUCATORS (3 credits)**
This course is designed for education graduate students who wish to take a field-based biology course that uses an interdisciplinary approach to understanding the ecosystem of the tallgrass prairie. This course engages graduate students in methods reflecting multidisciplinary STEM strategies (e.g. scientific inquiry, modeling, geographic information system mapping, etc.) associated with research taking place at the Glacier Creek Preserve. Graduate students completing this course will develop advanced knowledge of ecology, restoration ecology, and monitoring of prairie habitat restoration. Graduate students will focus on the technical, biogeochemical, ecological and cultural aspects of analyzing and restoring the prairie ecosystem and its various habitats. (Cross-listed with STEM 8170)

**Prerequisite(s)/Corequisite(s):** Graduate Standing or Permission from the Instructor.

**BIOL 8186 LIMNOLOGY (4 credits)**
A study of the physical, chemical and biotic relationships that serve to establish and maintain plant and animal communities in a freshwater environment. (Cross-listed with BIOL 4180)

**Prerequisite(s)/Corequisite(s):** BIOL 1450, 1750, and organic chemistry. Not open to nondegree students.
BIOL 8190 COMMUNITIES AND ECOSYSTEMS (3 credits)
Advanced study of populations, communities and ecosystems; may require overnight weekend field trips.
Prerequisite(s)/Corequisite(s): BIOL 3340/8345, graduate in biology. Not open to nondegree students.

BIOL 8200 PLANT ECOLOGY (4 credits)
Advanced study of plant communities and of individual plant species including relationships with the environment and vegetative dynamics. Emphasis on methods of evaluation and analysis. May require overnight field trips.
Prerequisite(s)/Corequisite(s): BIOL 3340/8345, graduate in biology. Recommended: BIOL 3530/8535. (Fall) Not open to nondegree students.

BIOL 8216 FIRE ECOLOGY (3 credits)
Study of fire in ecosystems including characteristics of fire, effects on flora, fauna and the abiotic environment, and use in maintaining native ecosystems. May include two weekend field exercises. (Cross-listed with BIOL 4210)
Prerequisite(s)/Corequisite(s): BIOL 2140 and 3340, junior-senior. Not open to nondegree students.

BIOL 8225 POPULATION BIOLOGY (4 credits)
An examination of topics in population ecology and population genetics including selection on individuals and groups, mating systems, life history characteristics, growth and regulation of populations and population interactions. Outside research project required. (Cross-listed with BIOL 4220)
Prerequisite(s)/Corequisite(s): BIOL 2140. Lecture and discussion only. Not open to nondegree students.

BIOL 8236 ORGANIC EVOLUTION (3 credits)
A study of organic evolution in terms of evidences which support the theory and the mechanisms involved in the process. (Cross-listed with BIOL 4230)
Prerequisite(s)/Corequisite(s): BIOL 2140. Lecture and discussion only. Not open to nondegree students.

BIOL 8246 MARINE BIOLOGY (3 credits)
An introduction to the marine environment, this course explores physical conditions of the ocean including ocean chemistry, salinity, waves and currents, and tides as well as the ecology of planktonic, nektonic and benthic organisms— their communities and environments. Impacts of humans on the marine environment will also be covered. (Cross-listed with BIOL 4240)
Prerequisite(s)/Corequisite(s): BIOL 1750

BIOL 8250 DESIGN AND ANALYSIS OF BIOLOGICAL RESEARCH (3 credits)
This course examines the statistical aspects of the design of laboratory and field experiments in biology. Basic statistical methods are reviewed and advanced methods presented. Statistical computer packages are used.
Prerequisite(s)/Corequisite(s): Undergraduate course in statistics is recommended. Not open to nondegree students.

BIOL 8256 FIELD MARINE BIOLOGY (1 credit)
This lab is a hands-on introduction to the marine environment using a field trip to the Gulf Coast. Students will observe first-hand examples of local marine habitats and organisms. Students will be required to take a trip to the Gulf Coast of Texas, Louisiana, Mississippi, and Alabama during Spring Break. Students will be required to provide their own basic camping and snorkeling gear. (Cross-listed with BIOL 4250)
Prerequisite(s)/Corequisite(s): BIOL 1750, previous or concurrent enrollment in BIOL 4240 and permission of instructor.

BIOL 8266 BEHAVIORAL ECOLOGY (3 credits)
Behavioral ecology is the study of behavior from an evolutionary and ecological point of view. Through the integration of research at different organizational levels and the use of many different organisms, behavioral ecology is one of the most integrative fields in biological sciences. This course will provide an introduction to the basic concepts of behavioral ecology and the integrative approaches used in behavioral ecology. Further, the course will train students in critical reading and discussion of primary literature in writing and in an oral setting. (Cross-listed with BIOL 4260)
Prerequisite(s)/Corequisite(s): BIOL 1750 and PSYC 4270 or PSYC 8276

BIOL 8276 ANIMAL BEHAVIOR (3 credits)
Behavior of diverse animals for the understanding of the relationships between nervous integration and the behavior manifested by the organism, as well as the evolution and adaptive significance of behavior as a functional unit. Lecture only. (Cross-listed with BIOL 4270, PSYC 4270, PSYC 8276)
Prerequisite(s)/Corequisite(s): BIOL 1750 and PSYC 1010 or permission of instructor, junior-senior.

BIOL 8286 ANIMAL BEHAVIOR LABORATORY (3 credits)
Laboratory and field studies of animal behavior with an ethological emphasis. Classical laboratory experiences and independent studies will be conducted. (Cross-listed with BIOL 4280, PSYC 4280, PSYC 8286)
Prerequisite(s)/Corequisite(s): PSYC 4270 or BIOL 4270 or PSYC 8276 or BIOL 8273. Not open to non-degree graduate students.

BIOL 8300 ECOLOGY OF RUNNING WATER (4 credits)
This course will cover current topics in stream ecology with an emphasis on the impact of modern human management of prairie and Midwestern streams. Students will read, analyze, and discuss selected articles from major journals. Several field trips will be conducted to allow students to examine actual streams of different types throughout the Midwest.
Prerequisite(s)/Corequisite(s): BIOL 3340/8345 or BIOL 4180/8186. Not open to nondegree students.

BIOL 8326 HORMONES & BEHAVIOR (3 credits)
In this course, students will examine the interaction between hormones, chemical messengers released from endocrine glands, and behavior in both human and animal systems. Methods for studying hormonal issues on behavior will be addressed. This course will provide students in psychology, biology, and related disciplines an understanding of how hormones affect sensory processing, motor activities, and processing of information in the central nervous system. (Cross-listed with BIOL 4320, PSYC 4320, PSYC 8326)
Prerequisite(s)/Corequisite(s): Admission to graduate level PSYC program or permission of dept. Not open to non-degree graduate students.

BIOL 8330 ADVANCED TOPICS IN GENERAL PHYSIOLOGY (3 credits)
Studies in general physiology including such topics as photo-physiology, hormonal regulation of metabolic pathways, temperature-related phenomena, and cytogenetic physiology. Lecture, laboratory, and written report.
Prerequisite(s)/Corequisite(s): Graduate in biology. Not open to nondegree students.

BIOL 8345 ECOLOGY (4 credits)
Study of interrelationships between organisms and their biotic and abiotic environment; includes population biology, community dynamics, biotic interactions and evolution. Labs include field exercises. (Cross-listed with BIOL 3340)
Prerequisite(s)/Corequisite(s): BIOL 1450 and 1750. Not open to nondegree students.

BIOL 8346 ICHTHYOLOGY (4 credits)
A study of the biology of fishes, including their evolution, anatomy, physiology, ecology, distribution, classification and identification with emphasis on North American freshwater fishes. (Cross-listed with BIOL 4340)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.
BIOL 8356  LICHENOLOGY (3 credits)
Taxonomy, morphology and ecology of lichenized fungi with laboratory emphasis on identification of the local species. Other topics for discussion will include symbiosis, air pollution and lichens, chemosystematics and modern herbarium techniques for lichens and other cryptogams. (Cross-listed with BIOL 4350)
Prerequisite(s)/Corequisite(s): BIOL 1450/1750, graduate in biology. Not open to nondegree students.

BIOL 8376  PHYCOLOGY (3 credits)
A survey of the algae dealing with their ecology, morphology, physiology, taxonomy and evolution. (Cross-listed with BIOL 4370)
Prerequisite(s)/Corequisite(s): BIOL 1450/1750 or permission of instructor, graduate in biology. Not open to nondegree students.

BIOL 8386  MORPHOLOGY OF NON-VASCULAR PLANTS (4 credits)
Structural, reproductive, ecological and evolutionary features of the major non-vascular plant groups including prokaryotes, algae, fungi, lichens and bryophytes. (Cross-listed with BIOL 4380)
Prerequisite(s)/Corequisite(s): BIOL 1450-1750, graduate. Not open to nondegree students.

BIOL 8396  VASCULAR PLANT MORPHOLOGY (3 credits)
A survey of living and fossil vascular plants with emphasis on their comparative anatomy and morphology and their evolution. (Cross-listed with BIOL 4390)
Prerequisite(s)/Corequisite(s): BIOL 1450, BIOL 1750 or equivalent, graduate in biology.

BIOL 8416  WETLAND ECOLOGY AND MANAGEMENT (3 credits)
This course will examine the principles and theory of wetland ecology with application towards wetland management and regulation. An interdisciplinary overview of physical, biological and regulatory aspects of wetlands will allow students to synthesize information from their backgrounds in geography, geology and ecology. Definitions, classifications, natural processes and functions of wetland environments will be presented. Labs concentrate on field techniques used to assess specific plant, animal, soil, and hydrological characteristics of wetlands. (Cross-listed with ENVN 4410 and BIOL 4410)
Prerequisite(s)/Corequisite(s): BIOL 3340 or instructor permission.

BIOL 8426  RESTORATION ECOLOGY (3 credits)
Restoration Ecology examines how people assist with the recovery of ecosystems that have been degraded. The course will examine the theory and application of restoration ecology through lecture, discussion, field trips, and development of a restoration management plan for a degraded ecosystem near Omaha. The course will provide information and resources used by restoration and land management professionals to plan, implement, and manage restorations. (Cross-listed with BIOL 4420, ENVN 4420)
Prerequisite(s)/Corequisite(s): Graduate standing.

BIOL 8436  BIOLOGY OF FUNGI (3 credits)
A functional and developmental approach to the study of fungi. Fungal structure, growth, physiology and biotic interactions will be examined. (Cross-listed with BIOL 4430)
Prerequisite(s)/Corequisite(s): BIOL 1450-1750, graduate. Not open to nondegree students.

BIOL 8446  PLANT PHYSIOLOGY (4 credits)
A study of plant processes and functions with emphasis on photosynthesis, growth and development, metabolism and mineral nutrition. (Cross-listed with BIOL 4440)
Prerequisite(s)/Corequisite(s): BIOL 1450, BIOL 1750, and CHEM 2210 or CHEM 2250; or permission of instructor.

BIOL 8450  BIOLOGY EDUCATION RESEARCH METHODS (3 credits)
In this course, students will learn the methods of conducting pedagogical research in Biology, understand how people learn the concepts, practices, and ways of thinking in science and engineering; understand the nature and development of expertise in a discipline; help identify and measure appropriate learning objectives and instructional approaches that advance students toward those objectives; contribute to the knowledge base in a way that can guide the translation of statistical findings to classroom practice; and identify approaches to make science and engineering education broad and inclusive. Students will work with live data sets to evaluate effective pedagogical approaches in the biology classroom of various audiences (K-16).

BIOL 8454  VIROLOGY LABORATORY (1 credit)
A laboratory to accompany virology lecture. This course enables students to work with viruses in the laboratory and to conduct experiments using viral systems. Experimental design, data gathering, data analysis and manuscript writing will be integral parts of the course. The experiments include host cell characterization, viral infection, virus purification from infected cells, viral genome isolation and viral transfection. Sequence analysis and sequence comparison will also be introduced. Laboratory exercises will emphasize fundamental molecular biology techniques and instrumentation. Usually offered in Fall semester. (Cross-listed with BIOL 4454)

BIOL 8456  VIROLOGY (3 credits)
A comprehensive course about viruses. The course will address principles of viral infection, virus-host interaction, viral evolution and viral disease processes. Cellular and molecular aspects of viral infection will be the primary focus. This will include examination of viral particles, viral multiplication cycles, regulation of gene expression, viral assembly and viral escape. Viral immunology, viral defenses, viral vaccines and antiviral compounds will also be addressed. Emerging viruses and current viral topics will be a major part of the course. Usually offered in Fall semester. (Cross-listed with BIOL 4456)

BIOL 8496  MEDICINAL USES OF PLANTS (3 credits)
A scientific study of the biochemical properties and physiological effects of medicinal plants, including their historical uses, current applications to varying systems of the human body, and pathways by which today's potent drugs have transitioned from wild flora. Usually offered Fall semesters of even-numbered years. (Cross-listed with BIOL 4496)

BIOL 8535  FLORA OF THE GREAT PLAINS (4 credits)
A study of common vascular plants found in the Great Plains region, including identification, description, and classification techniques and an introduction to the plant communities of Nebraska. Usually offered every Fall and Summer. (Cross-listed with BIOL 3530)
Prerequisite(s)/Corequisite(s): BIOL 1450-1750. Not open to nondegree students.

BIOL 8576  PALEOBOTANY (4 credits)
A comprehensive study of the biology and evolution of plants through geologic time, including fossil plant structure, function and paleoecology. (Cross-listed with BIOL 4576)
Prerequisite(s)/Corequisite(s): BIOL 1450/1750, graduate status or permission of instructor. Not open to nondegree students.

BIOL 8606  GIS APPLICATIONS FOR ENVIRONMENTAL SCIENCE (1 credit)
This course introduces the use of geographic information systems (GIS) and other geospatial tools for work in the fields of environmental science, ecology, and natural resource management. The course will develop a working knowledge of the common software and hardware tools used by ecologists through hands-on projects. (Cross-listed with BIOL 4600, ENVN 4600)
Prerequisite(s)/Corequisite(s): BIOL 3340 or permission of instructor.
BIOL 8635 PLANT ANATOMY AND DEVELOPMENT (4 credits)
A study of cells, tissues and organs of vascular plants with particular emphasis on internal structure of seed plants, their development, and structure-function relationships. Must enroll in lab. Usually offered in alternate years. (Cross-listed with BIOL 3630)
Prerequisite(s)/Corequisite(s): BIOL 1450, 1750 and junior-senior.

BIOL 8646 MICROBIAL PHYSIOLOGY (4 credits)
Examination of physiological diversity found among microorganisms with an emphasis on experimental procedures and practical applications. Lecture and laboratory. (Cross-listed with BIOL 4640)
Prerequisite(s)/Corequisite(s): BIOL 3020. Not open to nondegree students.

BIOL 8654 BIOCHEMISTRY I LABORATORY (1 credit)
A laboratory course to help integrate the concepts learned in biochemistry lecture with the development of biochemical laboratory skills including experimental design, data analysis, presentation of results and communication of scientific information, with a focus on formal instruction in journal-style writing and notebook skills. There is an emphasis on protein properties, including enzyme activity. Fulfills the third writing course requirement for students majoring in chemistry when NSCI 3940 and another approved laboratory course have been completed with a C- or better. (Fall) (Cross-listed with BIOL 4654, CHEM 4654, CHEM 8654).

BIOL 8656 BIOCHEMISTRY I (3 credits)
A comprehensive introduction to biochemistry emphasizing: structure-function relationships for proteins, carbohydrates, lipids, and nucleic acids; protein purification; enzyme kinetics and mechanisms; membranes and membrane transport; carbohydrate metabolism including glycolysis, the citric acid cycle and oxidative phosphorylation; and important applications of thermodynamics and the properties of water to living systems. (Fall) (Cross-listed with BIOL 4650, CHEM 4650, CHEM 8656).
Prerequisite(s)/Corequisite(s): CHEM 2260 and CHEM 2274; and either CHEM 2400 or BIOL 3020, all with a C- or better. Other comparable courses taken at accredited colleges or universities are acceptable. BIOL 8656 must be taken concurrently.

BIOL 8664 BIOCHEMISTRY II LABORATORY (1 credit)
A laboratory course to help integrate the concepts learned in Biochemistry II lecture with the development of biochemical laboratory skills, to gain practical experience in experimental design, data analysis, presentation of results and communication of scientific information, with a focus on formal instruction in journal-style writing and notebook skills. There is an emphasis on nucleic acid properties. Fulfills the third writing course requirement for students majoring in chemistry when NSCI 3940 and another approved laboratory course have been completed with a C- or better. (Spring) (Cross-listed with BIOL 4664, CHEM 4664, CHEM 8664).

BIOL 8666 BIOCHEMISTRY II (3 credits)
A continuation of the study of the structure and function of biomolecules and biochemical reactions with an emphasis on metabolism of carbohydrates, lipid, amino acids and nucleotides, and the chemistry of signal transduction and genetic information transfer. (Spring) (Cross-listed with BIOL 4660, CHEM 4660, CHEM 8666).
Prerequisite(s)/Corequisite(s): CHEM 8656 and CHEM 8654 or BIOL 8656 and BIOL 8664 with a grade of B- or better. BIOL 8666 must be taken concurrently.

BIOL 8716 TOXICOLOGY (3 credits)
An overview of the fundamentals of toxicology. Concepts include the dose-response relationship, absorption, distribution and excretion of toxicants, and the biotransformation of xenobiotics. Emphasis will be given to metals, pesticides, pharmaceutical compounds, chemical carcinogenesis and endocrine disruption. Usually offered Fall. (Cross-listed with BIOL 4710)
Prerequisite(s)/Corequisite(s): CHEM 2210 or 2260 and BIOL 1750, BIOL 3020 or equivalent.

BIOL 8735 FAUNA OF THE GREAT PLAINS (3 credits)
A survey of the common animal groups found in the Great Plains, including their evolution, ecology, distribution and specific adaptations to the environment of the temperate North American grasslands. (Cross-listed with BIOL 3730)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.

BIOL 8736 VERTEBRATE ENDOCRINOLOGY (3 credits)
An overview of the fundamentals of vertebrate endocrinology. Concepts include: the mammalian hypothalamus-pituitary system, the endocrinology of mammalian reproduction, the mammalian adrenal glands, endocrine disruption, endocrinology and metabolism. (Cross-listed with BIOL 4730)
Prerequisite(s)/Corequisite(s): Organic chemistry, BIOL 1750, BIOL 3020 or equivalent.

BIOL 8745 HISTOLOGY (4 credits)
Analysis of the microscopic anatomy of tissues and organs, their adaptations and functional significance. (Cross-listed with BIOL 3740)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.

BIOL 8746 ANIMAL PHYSIOLOGY (3 credits)
An overview of the fundamentals of animal physiology. Concepts include: the physiology of nerve and muscle function, endocrine function, cardiovascular and respiratory function, oxygen and carbon dioxide delivery by the blood, and osmoregulation and excretion. The course is comparative in nature, including examples from humans, mammals, vertebrates and invertebrate animals. Usually offered Spring. (Cross-listed with BIOL 4740.)

BIOL 8760 CLINICAL REASONING (3 credits)
This is an intensive class in which students will translate biological concepts into solving case-based scenarios in clinical medicine. Relevant readings will prepare students to address these challenges in small-group settings. Intended as an advanced preparatory course for healthcare professionals or students desiring exposure to clinical decision-making. Usually offered during Summer semester.
Prerequisite(s)/Corequisite(s): Molecular Biology; Microbiology or Immunology; plus instructor approval.

BIOL 8766 GENOME TECHNOLOGY AND ANALYSIS (3 credits)
This course will introduce the latest genome sequencing technologies and their broad applications in biology and medicine. Students will learn how genome sequencing is conducted by different platforms and obtain practical experience of how to use bioinformatics tools for genome analysis. Students are expected to be able to perform sequence analysis efficiently and interpret the results properly. (Cross-listed with BIOL 4760)
Prerequisite(s)/Corequisite(s): BIOL2140 Genetics; or Permission of instructor

BIOL 8770 CLINICAL READINGS (3 credits)
This course is a rigorous study of current biomedical, translational, and clinical primary literature spanning a wide range of human health and disease.
Prerequisite(s)/Corequisite(s): Graduate and written permission of graduate faculty member.

BIOL 8786 VERTEBRATE ZOOLOGY (4 credits)
A study of the general biology of the subphylum vertebrata including the morphology, anatomy, physiology and ecology of vertebrate representatives. (Cross-listed with BIOL 4780)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.

BIOL 8796 MAMMALOGY (4 credits)
The biology of mammals, including their evolution, functional morphology, physiology, ecology, zoogeography, behavior, classification and identification with emphasis on North American groups. Field trips. (Cross-listed with BIOL 4790)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.
BIOL 8826 INTRODUCTION TO ENVIRONMENTAL LAW & REGULATIONS (3 credits)
Seminar on environmental law and regulation. The course will address federal regulations, implementing instructions, legal principles and requirements. The major federal environmental laws, air and water quality, solid and hazardous waste, and pollution prevention and remediation will be discussed. Usually offered Fall semesters. Cross-listed with (BIOL 4820, ENVN 4820, GEOG 4820, GEOG 8826, PA 4820, PA 8826)
Prerequisite(s)/Corequisite(s): Junior-senior and permission.

BIOL 8830 ENVIRONMENTAL PHYSIOLOGY (3 credits)
A detailed study of selected dynamic environmental factors and mechanisms of physiologic adaptation by organisms of various taxa. General physics, algebra, animal physiology, or permission of instructor.
Prerequisite(s)/Corequisite(s): General physics, algebra, animal physiology. Not open to nondegree students.

BIOL 8836 DEVELOPMENTAL GENETICS (2 credits)
This course considers experimental approaches in developmental genetics and provides students with first-hand experience in laboratory techniques used in developmental genetics. (Cross-listed to BIOL 4830)
Prerequisite(s)/Corequisite(s): This course considers experimental approaches in developmental genetics and provides students with first-hand experience in laboratory techniques used in developmental genetics.

BIOL 8846 HERPETOLOGY (4 credits)
The biology of amphibians and reptiles, including their evolution, classification, anatomy, physiology, ecology, distribution and identification with emphasis on North American groups. (Cross-listed with BIOL 4840)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.

BIOL 8856 DEVELOPMENTAL BIOLOGY (3 credits)
This course explores principles underlying the development of multicellular organisms, stressing the environmental, genetic, molecular, cellular, tissue, and evolutionary mechanisms of animal development. Usually offered once per year. (Cross-listed with BIOL 4850)

BIOL 8866 COMPARATIVE GENOMICS (3 credits)
This course will introduce fundamental concepts in genomics and genome comparison. Students will learn how genomes are constructed, how they evolve, how individual genomes are unique, and what genomic knowledge means in terms of human health and medicine. (Cross-listed with BIOL 4860)

BIOL 8876 MOLECULAR AND CELLULAR NEUROBIOLOGY (3 credits)
This course presents foundational topics in molecular and cellular neurobiology in the context of how the nervous system is functionally organized. Topics include: nervous system cell types and their subcellular organization; electrical properties of neurons and glia; energy metabolism and biochemistry of the brain; intra- and intercellular neuronal signaling; the regulation of gene expression in neuronal cells; synaptic plasticity; and how these are altered in disease. (Cross-listed with NEUR 4870, BIOL 4870, NEUR 8870)
Prerequisite(s)/Corequisite(s): NEUR 1500 and BIOL 3020 or permission of instructor.

BIOL 8886 INVERTEBRATE ZOOLOGY (4 credits)
A comprehensive study of the invertebrate animals. (Cross-listed with BIOL 4880)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.

BIOL 8896 GENES, BRAIN, AND BEHAVIOR (3 credits)
This course will evaluate the complex interaction between an organism's genome and neural activity pattern in the nervous system as related to behavior. In this course students will explore how changes in gene expression (allelic variants, epigenetics, differential regulation) and gene networks within neural tissue can reciprocally influence behaviors such as communication, foraging, reproduction, and cognition. (Cross-listed with BIOL 4890, NEUR 4890, PSYC 8896)
Prerequisite(s)/Corequisite(s): Not open to non-degree graduate students.

BIOL 8926 PARASITOLOGY (4 credits)
Taxonomy, morphology, physiology, life history dissemination and control of the parasitic protozoans, helminths and arthropods. (Cross-listed with BIOL 4920)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.

BIOL 8946 ENTOMOLOGY (4 credits)
The study of insects; their classification, morphology, physiology, behavior, life histories, ecology and evolution. (Cross-listed with BIOL 4940)
Prerequisite(s)/Corequisite(s): BIOL 1750.

BIOL 8956 VERTEBRATE EMBRYOLOGY AND ANATOMY (4 credits)
Development and phylogeny of vertebrate organ systems. Dissection of major vertebrate types, and study of developmental stages from fertilized egg to adult condition. (Cross-listed with BIOL 4950)
Prerequisite(s)/Corequisite(s): BIOL 1750. Not open to nondegree students.

BIOL 8966 ADVANCED GENETICS (3 credits)
An in-depth consideration of topics in genetics, including the conceptual and molecular definition of a gene, cytogenetics, mutation, population genetics, developmental genetics, gene regulation and the application of genetics to other areas of biology. (Cross-listed with BIOL 4960).
Prerequisite(s)/Corequisite(s): BIOL 2140 and BIOL 3020 and concurrent enrollment or completion of either CHEM 3650 or CHEM 4610 or CHEM 4650 or BIOL 4650, or permission of the instructor.

BIOL 8986 ORNITHOLOGY (4 credits)
An introduction to the general biology of birds, including their anatomy, physiology, behavior, ecology, classification and identification with emphasis on North American groups. Usually offered in alternate years. (Cross-listed with BIOL 4980)
Prerequisite(s)/Corequisite(s): BIOL 1750.

BIOL 8990 THESIS (1-6 credits)
An original and independent research project written under the supervision of a faculty thesis advisory committee.
Prerequisite(s)/Corequisite(s): Graduate student in biology and written permission of graduate faculty supervisor. Not open to non-degree graduate students.
