CHEMISTRY

The Department of Chemistry, which is approved by the American Chemical Society (ACS), offers both Bachelor of Science (B.S.) and Bachelor of Arts (B.A.) degrees. Students can choose among three B.S. degree options. The B.S. degree in Chemistry is designed for majors planning to be industrial or government chemists, planning to pursue a graduate degree in chemistry or biochemistry, or considering professional degrees in fields such as medicine. The B.S. degree with Concentration in Medicinal Chemistry is designed for students interested in health fields, graduate programs in life sciences or professional study such as pharmacy or medicine. The B.S. degree with Concentration in Education is designed for students planning to teach high school chemistry or plan to teach at a more advanced level and want to develop their teaching skills as part of their undergraduate education. The B.A. degree is appropriate for chemical technologists and pre-professional students, particularly fields other than the health sciences.

Other Information

Students working toward a degree in Chemistry or a Chemistry minor must earn a grade of "C-" or better in all courses used to fulfill Chemistry major or minor requirements. A GPA of 2.0 or higher in chemistry and cognate courses is required to graduate with a Chemistry major or minor.

The department highly encourages students to engage in undergraduate research with a faculty mentor. Students can start undergraduate research with CHEM 2950 or CHEM 4950 depending on their background and the needs of their faculty supervisor.

To make room for students making regular academic progress, those students who have been enrolled in a course three or more times: 1) will not be allowed to enroll prior to the first week of classes; and 2) will need permission of the instructor to enroll.

High school students who have successfully completed advanced high school chemistry courses (AP and/or IB) and are considering a modified course of study should consult with the department.

Student Groups

The Department of Chemistry has an active student led Chemistry Club. For more information visit (https://www.unomaha.edu/college-of-arts-and-sciences/chemistry/student-opportunities/student-organizations.php)

Contact Information

337 Durham Science Center
402.554.2651

Website (http://www.unomaha.edu/college-of-arts-and-sciences/chemistry/)

Degrees Offered

- Chemistry, Bachelor of Arts (http://catalog.unomaha.edu/undergraduate/college-arts-sciences/chemistry/chemistry-ba/)
- Chemistry, Bachelor of Science (http://catalog.unomaha.edu/undergraduate/college-arts-sciences/chemistry/chemistry-bs/)
- Chemistry, Bachelor of Science with a Concentration in Medicinal Chemistry (http://catalog.unomaha.edu/undergraduate/college-arts-sciences/chemistry/concentration-medicinal-chemistry/)
- Chemistry, Bachelor of Science with a Concentration in Chemistry Education (http://catalog.unomaha.edu/undergraduate/college-arts-sciences/chemistry/concentration-chemistry-education/)

Writing in the Discipline

All students are required to take a writing in the discipline course within their discipline. For the chemistry major, this is NSCI 3940 along with any two of the following courses: CHEM 3354, CHEM 3364, CHEM 4654, CHEM 4664, or another approved course.

Minors Offered

- Chemistry Minor (http://catalog.unomaha.edu/undergraduate/college-arts-sciences/chemistry/chemistry-minor/)

Love chemistry? Take the challenge and become a chemistry major! A career in chemistry is exciting. Most of our graduate majors go to professional schools (medical, dental and pharmacy schools and other health related careers), some pursue graduate schools, and the rest land a job in industry. Companies that hire chemists include pharmaceutical companies, bulk commodity chemical companies, food manufacturers, personal, and household care product companies, and some of our students enjoy their teaching in the K-12 schools!

Career options include, but are not limited to

- Professional (medical doctor, nursing, pharmacy, and dentistry);*
- Professor after graduate schools;*
- Lab Chemist
- Lab Technician
- Quality Assurance Specialist
- Science Teacher

*Advanced Degree Required

CHEM 1010 CHEMISTRY IN THE ENVIRONMENT AND SOCIETY (3 credits)

A study of modern society's impact on our environment and the chemistry needed to understand it. The primary focus is the underlying chemistry of the effects of energy production and properties of fuels while including social, political and economic connections. Impacts on air and water quality, climate change, and fossil fuels are discussed. Additional course topics may also include the ozone layer, plastics, medicine and nutrition. (Fall, spring) Fulfills a University General Education Natural/Physical Science Requirement.

Prerequisite(s)/Corequisite(s): MATH 1310 or MATH 1220 with a grade of C- or better or equivalent.

Distribution: Natural/Physical Sci General Education lecture

CHEM 1014 CHEMISTRY IN THE ENVIRONMENT AND SOCIETY LABORATORY (1 credit)

Laboratory for CHEM 1010, a survey of the relationship of chemistry to current problems in environmental control, medicine, technology and energy production. (Fall, Spring)

Prerequisite(s)/Corequisite(s): CHEM 1010 to be taken concurrently or completed previously with grade of C- or better.

Distribution: Natural/Physical Sci General Education lab course

CHEM 1120 STRATEGIES IN CHEMICAL PROBLEM SOLVING (2 credits)

This course focuses on the development of problem solving skills and learning strategy tools in the context of first semester college chemistry topics. It is primarily intended for students seeking a stronger background before enrolling in CHEM 1140 or CHEM 1180. However, the content should be valuable for a variety of courses. Not available for natural science credit, nor intended to meet chemistry requirements for other programs. (Fall)

Prerequisite(s)/Corequisite(s): MATH 1310 or MATH 1220 with C- or better or equivalent. MATH 1310 or MATH 1220 may also be taken concurrently. Not open to non-degree graduate students.
CHEM 1140 FUNDAMENTALS OF COLLEGE CHEMISTRY (4 credits)
A comprehensive introduction to the basic principles of chemistry. This course is intended for all students needing a one-semester introductory course with laboratory including allied health students continuing to CHEM 2210, or those seeking a stronger background before enrollment in CHEM 1180. (Fall, spring, possibly summer). Fulfills a University General Education Natural/Physical Science Requirement.
Prerequisite(s)/Corequisite(s): MATH 1220 or equivalent within last two years (C- or better); OR ACT Math subscore of at least 23 within last two years; OR ALEKS/Accuplacer score of at least 4 within last two years. CHEM 1144 concurrent or prior with C- or better.
Distribution: Natural/Physical Sci General Education lecture

CHEM 1144 FUNDAMENTALS OF COLLEGE CHEMISTRY LABORATORY (1 credit)
Laboratory explorations of chemical measurements, modeling, reactions and analyses. To be taken with CHEM 1140. (Fall, spring, possibly summer).
Prerequisite(s)/Corequisite(s): CHEM 1140 concurrent or prior with C- or better.
Distribution: Natural/Physical Sci General Education lab course

CHEM 1170 GENERAL CHEMISTRY I-II (5 credits)
Intended for students with significant backgrounds in chemistry, the course is a combination of CHEM 1180 and CHEM 1190 completed in one semester. This course also includes a lab section. During lecture, the following topics will be covered: introductory quantum theory, electronic structures, bonding theory, gas laws, solution properties and reactions, acid-base theory, ionic equilibria, complexation, oxidation-reduction, thermodynamics and kinetics. The laboratory will include the introduction of basic laboratory skills and scientific experimental design.
Prerequisite(s)/Corequisite(s): MATH 1330 or equivalent in the last two years (C- or better); OR ACT Math subscore of 26 in the last two years; OR ALEKS/Accuplacer score of at least 5 in the last two years; AND AP chemistry exam score 3 or greater; OR instructor permission.
Distribution: Natural/Physical Sci General Education lecture&lab

CHEM 1180 GENERAL CHEMISTRY I (3 credits)
A comprehensive survey of chemical principles; the first course in a two-semester sequence primarily for majors and those in the sciences. It is assumed that students will have a good background in elementary chemical principles. CHEM 1184 normally to be taken concurrently. (Fall, Spring, Summer) Fulfills a University General Education Natural/Physical Science Requirement.
Prerequisite(s)/Corequisite(s): MATH 1320 or equivalent in last two years (C- or better); OR ACT Chemistry exam score of 24 or better; OR AP chemistry with grade(s) of C+ or better, or 8 CH of chemistry with grades of C or better.
Distribution: Natural/Physical Sci General Education lecture

CHEM 1184 GENERAL CHEMISTRY I LABORATORY (1 credit)
A laboratory program designed to enhance laboratory skills and illustrate chemical principles. (Fall, Spring, Summer) Fulfills a University General Education Natural/Physical Science requirement.
Prerequisite(s)/Corequisite(s): CHEM 1180 concurrent or prior with a grade of C- or better.
Distribution: Natural/Physical Sci General Education lab course

CHEM 1190 GENERAL CHEMISTRY II (3 credits)
A study of acid-base theory, ionic equilibria, complexation, oxidation-reduction, thermodynamics and kinetics. CHEM 1194 to be taken concurrently. (Fall, Spring, Summer)
Prerequisite(s)/Corequisite(s): CHEM 1180 and 1184 with a grade of C- or better AND Math 1320. Concurrent enrollment in CHEM 1194.

CHEM 1194 GENERAL CHEMISTRY II LABORATORY (1 credit)
Quantitative analysis and study of solution equilibria. Includes statistics applied to quantitative analysis. (Fall, Spring, Summer)
Prerequisite(s)/Corequisite(s): CHEM 1180 and 1184 with a grade of C or better or department recommendation of advanced placement. Prereq or coreq: CHEM 1190 (if prereq must be with a grade of C or better).

CHEM 2210 FUNDAMENTALS OF ORGANIC CHEMISTRY (4 credits)
Chemistry 2210 is a course on basic organic chemistry, a one-semester course designed primarily for students in biology, elementary science education, and allied health fields.
Prerequisite(s)/Corequisite(s): CHEM 1140 and CHEM 1194, or CHEM 1190 and CHEM 1194 with a grade of C- or better in each. CHEM 2214 to be taken concurrently.

CHEM 2214 FUNDAMENTALS OF ORGANIC CHEMISTRY LABORATORY (1 credit)
Elementary organic chemistry laboratory to be taken concurrently with CHEM 2210. This course is for students in biology (non-premed, non-pre-dental tracks), elementary education and allied health majors.
Prerequisite(s)/Corequisite(s): CHEM 1140 and CHEM 1194, or CHEM 1190 and CHEM 1194 with a grade of C- or better in each. CHEM 2210 to be taken concurrently.

CHEM 2250 ORGANIC CHEMISTRY I (3 credits)
The fundamental chemistry of carbon compounds. (Fall, Spring, Summer)
Prerequisite(s)/Corequisite(s): CHEM 1190 and CHEM 1194 with a grade of C- or better.

CHEM 2260 ORGANIC CHEMISTRY II (3 credits)
A continuation of the foundational study of the compounds of carbon. (Fall, Spring)
Prerequisite(s)/Corequisite(s): CHEM 2250 with a grade of C- or better, obtained within the prior twelve months. CHEM 2274 concurrent or prior with a grade of C- or better.

CHEM 2274 ORGANIC CHEMISTRY LABORATORY (2 credits)
A laboratory course in the skills and techniques of experimentation in organic chemistry. (Fall, Spring)
Prerequisite(s)/Corequisite(s): CHEM 1194 with a grade of C- or better and CHEM 2260 concurrent or prior with C- or better.

CHEM 2400 QUANTITATIVE ANALYSIS (3 credits)
Theory of quantitative analysis applied to gravimetric and volumetric analysis; theory of error and evaluation of analytical data; introduction to instrumental analysis and separation methods. (Fall)
Prerequisite(s)/Corequisite(s): CHEM 1190 and CHEM 1194 with a grade of C or better or equivalent. CHEM 2404 to be taken concurrently.

CHEM 2404 QUANTITATIVE ANALYSIS LAB (1 credit)
Laboratory application of principles of quantitative analysis and experience with sample preparations, titrations, and instrumental methods of analysis. Use of reaction chemistry, separations, and spectrophotometry in determinations. Introduction to quality control. (Fall)
Prerequisite(s)/Corequisite(s): CHEM 1190 and CHEM 1194 with a grade of C- or better or equivalent. CHEM 2404 to be taken concurrently.

CHEM 2500 INTRODUCTION TO INORGANIC CHEMISTRY (3 credits)
A survey of the inorganic chemistry of metallic and nonmetallic species, including atomic, molecular and crystal structures, composition, properties and reactivities. (Spring).
Prerequisite(s)/Corequisite(s): CHEM 1190 with a grade of C- or better.

CHEM 2930 APPLIED TOPICS IN CHEMISTRY (1-3 credits)
More thorough examination of a chemistry topic than in the regular curriculum. Content (e.g. polymers, forensics, brewing and cooking, chemical industry, historical chemistry, art and chemistry, glassblowing) will vary with offering.
Prerequisite(s)/Corequisite(s): Completion 4 credit hours of university chemistry with grade(s) of C- or better, or 8 CH of chemistry with grades of C or better.
CHEM 2950 INTRODUCTION TO RESEARCH IN CHEMISTRY (1 credit)
This course is intended to give students, possessing at least a high school background in chemistry, the opportunity to work with faculty and/or advanced students on an established research project. The creativity and communication expectations of these students will be less than for students enrolled in the 4000 level research courses. Guided laboratory/library work on an established research project.
Prerequisite(s)/Corequisite(s): Permission of instructor. Not open to non-degree graduate students.

CHEM 3030 ENVIRONMENTAL CHEMISTRY (3 credits)
This course connects fundamental chemical principles to processes observed in the environment. The environmental processes studied may or may not be anthropogenic in nature and will include every environmental domain (air, water, soil/minerals/rocks) and interactions between domains.
Prerequisite(s)/Corequisite(s): CHEM 1180 and CHEM 1184, CHEM 1190 and CHEM 1194, CHEM 2400 and CHEM 2404, or consent of the instructor

CHEM 3210 INTRODUCTION TO MOLECULAR MODELING (3 credits)
The course covers the advantages and limitations of current modeling systems, the criteria for choosing the appropriate modeling system to best solve a given problem and the computer resources needed to conduct the modeling experiments. Following an introduction to the theory behind a variety of modeling systems, students model organic and bioorganic compounds in projects designed to mimic real world applications. (Alternate Spring semesters). (Cross-listed with CHEM 8215).
Prerequisite(s)/Corequisite(s): CHEM 2260 and CHEM 2274 with a grade of C- or better.

CHEM 3350 PHYSICAL CHEMISTRY I (3 credits)
A presentation of selected topics from the areas of classical thermodynamics and electrochemistry. (Fall) (Cross-listed with CHEM 8355).
Prerequisite(s)/Corequisite(s): CHEM 2260, CHEM 2274, CHEM 2400, CHEM 2404, PHYS 2120; MATH 1960. (Chemistry courses must be with a grade of C or better). Concurrent enrollment in CHEM 3354.

CHEM 3354 PHYSICAL CHEMISTRY I LABORATORY (1 credit)
Physical chemistry laboratory covering topics in thermodynamics, kinetics and electrochemistry, to be taken concurrently with CHEM 3350/3355.
Prerequisite(s)/Corequisite(s): CHEM 2260, CHEM 2274, CHEM 2400, CHEM 2404, or consent of the instructor. CHEM 3210 or CHEM 3350 must be taken concurrently.
Distribution: Writing in the Discipline Sequenced Course

CHEM 3360 PHYSICAL CHEMISTRY II (3 credits)
A presentation of selected topics from the areas of quantum mechanics, spectroscopy, kinetics and statistical mechanics. (Spring) (Cross-listed with CHEM 8365).
Prerequisite(s)/Corequisite(s): CHEM 3350 and CHEM 3354 with a grade of C- or better.

CHEM 3364 PHYSICAL CHEMISTRY II LABORATORY (1 credit)
Physical chemistry laboratory covering topics in quantum mechanics, computational chemistry, spectroscopy, and kinetics, to be taken concurrently with CHEM 3360. Fulfills the third writing course requirement for students majoring in chemistry when NSCI 3940 and another approved laboratory course have been completed with a C- or better. Offered in Spring. (Cross-listed with CHEM 8369).
Prerequisite(s)/Corequisite(s): CHEM 3350 and 3354 with a grade of C- or better, to be taken concurrently with CHEM 3360.
Distribution: Writing in the Discipline Sequenced Course

CHEM 3424 SPECTROMETRIC CHARACTERIZATIONS (1 credit)
Laboratory course involving the use of spectrometric instrumentation for the identification of compounds containing organic functional groups. (Fall, alternate years) (Cross-listed with CHEM 8429).
Prerequisite(s)/Corequisite(s): CHEM 2260, CHEM 2274, CHEM 2400 and CHEM 2404 with a grade of C or better.

CHEM 3514 INORGANIC PREPARATIONS (1 credit)
Laboratory preparation and characterization of representative types of inorganic compounds by various standard and special techniques. (Spring)
Prerequisite(s)/Corequisite(s): CHEM 2274, CHEM 2400, CHEM 2404, CHEM 2500 with a grade of C- or better.

CHEM 3610 PRINCIPLES OF BIOCHEMISTRY FOR THE HEALTH SCIENCES (3 credits)
This course covers the introduction of biochemistry, biomolecules, and metabolism. It is primarily intended for students entering allied health fields.
Prerequisite(s)/Corequisite(s): CHEM 2210 or CHEM 2260 with a C- or better. Not open to non-degree graduate students.

CHEM 3650 FUNDAMENTALS OF BIOCHEMISTRY (3 credits)
A survey of biochemistry emphasizing: cell structure, energy, and metabolism; amino acid and protein structure/function, enzymes, and protein isolation; carbohydrates and carbohydrate metabolism (gluconeogenesis, glycogen metabolism); aerobic metabolism (citric acid cycle and oxidative phosphorylation); lipids, membranes, transport, cholesterol, and lipid metabolism; and nucleic acids. (Fall, Spring)
Prerequisite(s)/Corequisite(s): CHEM 2210 and CHEM 2214 or CHEM 2260 and CHEM 2274 with a grade of C- or better. Other comparable courses taken at accredited colleges or universities are acceptable. CHEM 3654 must be taken concurrently.

CHEM 3654 FUNDAMENTALS OF BIOCHEMISTRY LABORATORY (1 credit)
A laboratory course to help integrate the concepts learned in the fundamentals of biochemistry lecture with the development of biochemical laboratory skills including data analysis. (Fall, Spring)
Prerequisite(s)/Corequisite(s): CHEM 2210 and CHEM 2214 or CHEM 2260 and CHEM 2274 with a grade of C- or better. Other comparable courses taken at accredited colleges or universities are acceptable. CHEM 3650 must be taken concurrently.

CHEM 3710 ESSENTIALS OF MEDICINAL CHEMISTRY (3 credits)
This course is an introduction to human drug discovery, mechanism of action, metabolism, and drug-drug interaction, while demonstrating the interdisciplinary nature of medicinal chemistry. An emphasis is placed on drug design, drug structure, and the relationship of structure to drug action and metabolism. (Spring)
Prerequisite(s)/Corequisite(s): ENGL 1160 and CHEM 2260/ CHEM 2274 with a grade of C- or better.

CHEM 4230 ADVANCED ORGANIC CHEMISTRY - SYNTHESIS (3 credits)
An advanced lecture course in modern theories and organic reactions with application to synthesis. (Alternate Fall semesters) (Cross-listed with CHEM 8236).
Prerequisite(s)/Corequisite(s): CHEM 2260 with a grade of C- or better.

CHEM 4240 ADVANCED ORGANIC CHEMISTRY - MECHANISM (3 credits)
An advanced lecture course in organic chemical reactions. (Cross-listed with CHEM 8246).
Prerequisite(s)/Corequisite(s): CHEM 2260 and CHEM 2400 with a C- or better
CHEM 4250 ADVANCED ORGANIC CHEMISTRY: MECHANISMS AND MODELING (4 credits)
Presentation of advanced topics in organic chemistry focused on structure, bonding and reaction mechanisms. The use of molecular modeling software as means to predict structure, relative stabilities and reaction thermodynamics are covered in a hands-on environment. The course will survey various modeling methods and show its relevance to molecular orbital theory. The basic methodologies used to explore organic mechanisms are presented and then used to study mechanistic details of various reaction types. Students cannot count both Chem 4250 and Chem 4240 toward their degree. (Cross-listed with CHEM 8256).
Prerequisite(s)/Corequisite(s): CHEM 2260 and CHEM 2274 with a C- or better

CHEM 4310 POLYMER CHEMISTRY (3 credits)
An introduction to the chemical and physical properties of polymers. Emphasis will be on physical properties and structure/property relationships. Topics will include kinetics and synthesis. Students will gain an understanding of the characteristics of polymers and their applications. 
Prerequisite(s)/Corequisite(s): CHEM 2260 and CHEM 3350, each with a grade of C- or better, or instructor permission. Not open to non-degree graduate students.

CHEM 4400 INSTRUMENTAL ANALYSIS (3 credits)
Study of instrumentation for use in quantitative and trace analysis. Advanced instrumental methods and electronics for instrumentation are included. (Spring) (Cross-listed with CHEM 8406).
Prerequisite(s)/Corequisite(s): CHEM 3360, CHEM 3364 and CHEM 3414 with a grade of C- or better. Concurrent enrollment in CHEM 4404.

CHEM 4404 INSTRUMENTAL ANALYSIS LABORATORY (1 credit)
Use of instrumentation in quantitative and trace analysis. Advanced instrumental methods and electronics for instrumentation are included. (Spring) (Cross-listed with CHEM 8409).
Prerequisite(s)/Corequisite(s): CHEM 3360, CHEM 3364, CHEM 3414 with a grade of C- or better. Concurrent enrollment in CHEM 4404.

CHEM 4500 ADVANCED INORGANIC CHEMISTRY (3 credits)
The application of bonding models for understanding of the composition, structure, and reactions of inorganic molecules, including organometallic and bioinorganic complexes. (Cross-listed with CHEM 8506).
Prerequisite(s)/Corequisite(s): CHEM 2500 and CHEM 3350 with a grade of C- or better. CHEM 3350 may be taken concurrently.

CHEM 4510 SOLID STATE INORGANIC CHEMISTRY (3 credits)
A study of the structural and electronic basis of materials properties in the solid state. Properties examined include electrical conductivity, ferromagnetism, ferroelectricity, and superconductivity. Some experimental work will be conducted.
Prerequisite(s)/Corequisite(s): CHEM 2500 and CHEM 3350 with a grade of C- or better; or permission of instructor.

CHEM 4540 BIOCHEMISTRY I (3 credits)
A comprehensive introduction to biochemistry emphasizing: structure-function relationships for proteins, carbohydrates, lipids, and nucleic acids; protein purification; enzyme kinetics and mechanisms; membranes and membrane transport; carbohydrate metabolism including glycolysis, the citric acid cycle and oxidative phosphorylation; and important applications of thermodynamics and the properties of water to living systems. (Fall) (Cross-listed with BIOL 4650, BIOL 8656, CHEM 8656).
Prerequisite(s)/Corequisite(s): CHEM 2260 and CHEM 2274; and either CHEM 2400 or BIOL 3020, all with a C- or better. Other comparable courses taken at accredited colleges or universities are acceptable. CHEM 4654 must be taken concurrently.

CHEM 4545 BIOCHEMISTRY II LABORATORY (1 credit)
A laboratory course to help integrate the concepts learned in biochemistry lecture with the development of biochemical laboratory skills including experimental design, data analysis, presentation of results and communication of scientific information, with a focus on formal instruction in journal-style writing and notebook skills. There is an emphasis on protein properties, including enzyme activity. Fulfills the third writing course requirement for students majoring in chemistry when NSCI 3940 and another approved laboratory course have been completed with a C- or better. (Fall) (Cross-listed with BIOL 4654, BIOL 8654, CHEM 8654).

CHEM 4546 BIOCHEMISTRY II LABORATORY (1 credit)
A continuation of the study of the structure and function of biomolecules and biochemical reactions with an emphasis on metabolism of carbohydrates, lipids, amino acids and nucleotides, and the chemistry of signal transduction and genetic information transfer. (Spring) (Cross-listed with BIOL 4660, BIOL 8666, CHEM 8666).
Prerequisite(s)/Corequisite(s): CHEM 4500 and CHEM 4545 or CHEM 4545 and BIOL 4650. CHEM 4546 must be taken concurrently (Chemistry courses must have a grade of C- or better)

CHEM 4564 BIOCHEMISTRY II LABORATORY (1 credit)
A laboratory course to help integrate the concepts learned in Biochemistry II lecture with the development of biochemical laboratory skills, to gain practical experience in experimental design, data analysis, presentation of results and communication of scientific information, with a focus on formal instruction in journal-style writing and notebook skills. There is an emphasis on nuclear acid properties. Fulfills the third writing course requirement for students majoring in chemistry when NSCI 3940 and another approved laboratory course have been completed with a C- or better. (Spring) (Cross-listed with BIOL 4664, BIOL 8664, CHEM 8664).

CHEM 4610 BIOCHEMISTRY OF METABOLISM (4 credits)
The course covers the structure-function relationships of proteins, carbohydrates, lipids and nucleotides, with an emphasis on the biochemistry of metabolism and molecules of metabolism. It is primarily intended to prepare students for health-related professional schools. (Spring)
Prerequisite(s)/Corequisite(s): CHEM 2260 and CHEM 2274 with a grade of C- or better.
CHEM 4930  SPECIAL TOPICS IN CHEMISTRY (1-3 credits)
Selected special topics in chemistry. (Cross-listed with CHEM 8936).
Prerequisite(s)/Corequisite(s): CHEM 2260, CHEM 2400 with a grade of C or better. Some topics will require more advanced prerequisites and will be accepted for advanced course work in chemistry.

CHEM 4950  CHEMISTRY PROJECTS (1 credit)
Initiation of an independent student research project, and communication of the results.
Prerequisite(s)/Corequisite(s): Depends on the project. Generally, junior standing.

CHEM 4960  CHEMISTRY PROBLEMS (1-3 credits)
Independent student research and communication of the results in a written report. If NSCI 4960 is taken concurrently, the CHEM 4960 report is replaced by an oral presentation. (Cross-listed with CHEM 8966).
Prerequisite(s)/Corequisite(s): CHEM 4950 with a grade of C or better and permission of instructor.
